As mentioned above, the messenger creates a queue of all client requests in a single thread, so the service receives requests one at a time. If you allow your service to be started and turned on, when the service is started, the system will not destroy the service when all clients fade out. In this case, the service runs until the service is stopped with STUPSELH () or other component stop calls (), regardless of whether it is linked to any clients. When the last client unsubscribes from the service, the system destroys the service, unless the service was also started by StartService (). Customers should unbundle services at appropriate times, as discussed in additional notes. The return value of Bindservice () indicates whether the requested service exists and whether the client is allowed access to it. For example, a music player may find it useful to allow its service to run indefinitely and also provide the binding. = NULL flag / ** indicating whether to call the service binding. The client receives the binder and can use it to directly access the public methods available in the implementation of the binder or the service. Here is how to set it up: In your service, create an instance of the binder with the following: Contains public methods that the customer can call. Here is an activity that links to the localservice and calls GetRandomNumber () when a button is clicked: Binding Active: Activity () {Private Latin Latin odnes jAtse euq // oticlpxe oAvres mu a odagil somet euqrop //(rednibi oAvres ,emanssalC emaNtnenopmoC detcennocecivresno diov cilbup adicelebatse A oAvres o moc ofXenoc a odnauQ odamahc //() (noitcennoCecivreS weN = noitcennocM noitcennoCecivreS ;ecivresM ecivreslacoL })oslaF = dnuobm)"detcennociecivresno" ,gat(e.gol{ }emantnenopmoc ;emaNessalC (detcennociecivresno ofSrevid ruititsbus etnemadarepseni atcenosed oAvres o moc ofXenoc a odnauq odamahc //)eurt = dnuobm)(ecivresteg,rednib = ecivresm redniblacoL.ecivreslacoL omoc oAvres = redniB laV ,oAvres od lapicnirp ecafretni a moc rigaretni arap essalc * * * / ,dnuoB naeloob / * ,sianoicida saton etlusnoc ,ralucnivsed e raqil es arap sodainporpa sotnemom erbos sepuSamrofni siam arap oAvres od (rebmunmodharteg ramahc medop setneilc so ,olpmexe rop ,ecivreslacoL od odotAm mu emahc //(dnuobm fl(}rev ;(kcilcnotubno ofSrevid / * kcilcno otubirta ;diordnA o moc odotAm etse * arap axena ovluqra tuoyal on ofAtob of odacilc A ofAtob mu odnauq odamahc ** /) eslaF = dnuobM joXenoc(ecivresdnibnU)(potsNO.repus{ ((potSnO nuF edirrevO)) etaerC .otu dnib.txetnoC ,ofXenoc ,ofSAnetnl(ecivresdnib > - tnetnl(.javaj.essalc :: ecivreslacoL ,otsil ecivreslacoL ofSAnetnl A ralucniv //)(tratsno.repus{ ((tratsno ritrevid es edirrevo))niam.tuoyal.r(weivtnetnoctes)etatsecnatsnidevas(etaerco.repus{ })etocap .etatsecnatsnidevas etaerco edirrevo }) eslaf = dnuobm)(emantnenopmoc :Ogra(detcennociecivresno ritrevid es edirrevo } eurt = dnuobm)(ecivresteg,rednib = ecivresm redniblacoL.ecivreslacoL omoc oAvres = redniB laV ecnatsni ecivreslacoL rebto e redniBi o aAnal ,ecivreslacoL odalucniV //(:oAvreS ,emaNtnenopmoC ,emaNessalC(detcennociecivresnO oditrevid edirrevO(noitcennoCecivreS :tcejbO = noitcennoC laV etavirP / *)(ECIVRESDNIB arap adassap ,oAvres ed ofSaalucniv arap sogor enifeD ** / oslaF = naeloob ,dnuobM raV etavirP ecivreslacoL .:ECIVRESM oirpArp oirpArp osson me .)(ecivreSdnib .)
